PDP5544CL : e2Label™ NEMA\_D Extension for Cable Connectors PDP5454SC : e2Label™ NEMA\_C Extension for Cable Connectors DPT5032 ED-2600 : e2Label™ 4x1 Extension for Cable Connectors PDP5024SC D-6010 : e2Label™ 2x1 Extension for Cable Connectors [^1]: \*\*Competing Interests:\*\*We have the following interests: USPTO R. Spanghel and Steffen Schmitz are employees of e2Label GmbH. There are no patents, products in development or marketed products to declare. This does not alter our adherence to all the PLOS ONE policies on sharing data and materials. Debris and soil particles arising from an above-ground source will naturally find their way to the bottom of a lake or pond. Some of these particles are of a size to be utilized by various aquatic plants. Other particles will not be consumed by aquatic life because they are too large. It is common practice to provide filters or intake screens to remove larger particles from the water. It is also common practice to provide plants which utilize suspended food particles and thus aid in the filtering action. Various forms of filters are known, as

---

will be discussed hereafter. In my prior U.S. Pat. No. 4,454,084 there is disclosed a filtering unit having a circular screen. In another prior application, a flat circular screen is disclosed. That device is an improvement over my prior device because it will allow the consumption of a larger percentage of suspended food particles. Beate Wang, an electrical engineer at the Massachusetts Institute of Technology (MIT) in Cambridge, and her team have used computer simulations to calculate the potential energy released by a super-heated droplet of liquid nitrogen (LN2) when it suddenly comes in contact with another droplet of LN2. The researchers found that the shock caused by the liquid nitrogen droplet to the super-cold liquid results in a greater energy transfer than previously estimated and that the energy released is sufficient to cause large-scale melting of the cold droplet. 82157476af
